

Experiment 1

Prepared By:

Name: Mahin Raj

Course: BCA (2nd Semester)

SAP ID: 590025881

Academic Year: 2025-2026

Submitted To:

Mr. Vibhu Gautam

Faculty, School of Computer Science

UPES, Dehradun

Python Programming Lab

Experiment 1: Python Installation and starting with python

1. Install Python and understand difference between scripting and interactive modes in IDLE.

```
In [1]: #Scripting Mode: Write Python code in a .py file, then run the full program at once.  
name = "Mahin"  
print("Hello", name)
```

Hello Mahin

```
In [2]: #Interactive Mode: Have to type Python commands one by one, and Python gives the output immediately.  
5 + 2  
7  
name = "Mahin"  
name  
'Mahin'
```

Out[2]: 'Mahin'

2. Write Python programs to print strings in the given manner:

- a) Hello Everyone !!!
- b) Hello
World
- c) Hello
World
- d) ' Rohit ' s date of birth is 12\05\1999'

```
In [23]: print("Hello Everyone")
```

Hello Everyone

```
In [21]: print("Hello\nWorld")
```

```
Hello
World
```

```
In [22]: print("Hello \n  World")
```

```
Hello
World
```

```
In [3]: print("Rohit's date of birth is 12\\05\\1999")
```

```
Rohit's date of birth is 12\05\1999
```

3. Declare a string variable called x and assign it the value "Hello".
Print out the value of x

```
In [24]: x = "Hello"
         print(x)
```

```
Hello
```

4. Take different data types and print values using print function.

```
In [4]: name = "Mahin"
         age = 20
         height = 6.1
         is_student = True
         marks = [90, 85, 88]

         print("Name:", name)
         print("Age:", age)
         print("Height:", height)
         print("Is Student:", is_student)
         print("Marks:", marks)
```

```
Name: Mahin
Age: 20
Height: 6.1
Is Student: True
Marks: [90 85 88]
```

5. Take two variables, a and b. Assign your first name and last name. Print your Name after adding your First name and Last name together.

```
In [5]: F = "Mahin"
        L = " Raj"
        print(F + L)
```

Mahin Raj

6. Declare three variables, consisting of your first name, your last name and Nickname. Write a program that prints out your first name, then your nickname in parenthesis and then your last name.
Example output: George (woody) Washington.

```
In [8]: F = "Mahin"
        L = " Raj"
        n = "Boss"
        print(F + L)
        print(n)
```

Mahin Raj
Boss

7. Declare and assign values to suitable variables and print in the following way:

NAME: MAHIN RAJ
SAP ID: 590025881 DATE OF BIRTH: 12 OCT 2006
ADDRESS: UPES
Bidholi Campus
Pincode: 248007
Programme: AI&ML
Semester: 2

```
In [9]: name = "MAHIN RAJ"
        sap_id = 590025881
        dob = "12 OCT 2006"
```

```
address1 = "UPES"  
address2 = "Bidholi Campus"  
pincode = 248007  
Course = "BCA"  
semester = 2  
  
print("NAME:", name)  
print("SAP ID:", sap_id)  
print("DATE OF BIRTH:", dob)  
print("ADDRESS:", address1)  
print(address2)  
print("Pincode:", pincode)  
print("Course:", Course)  
print("Semester:", semester)
```
